ABSTRACT

System concept is an important theoretical characteristic and methodological principle that runs through Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era. As socialism with Chinese characteristics enters a new era, General Secretary Xi Jinping takes the Marxist system concept as the theoretical basis and socialism with Chinese characteristics as the field. He has conducted in-depth research and judgment, comprehensive analysis and systematic construction of the new situation at home and abroad, and opened up Marxism. A new realm of Sinicization. The system concept is born in dialectical materialism and historical materialism. On this theoretical basis, General Secretary Xi Jinping further pointed out the strategic positioning, characteristics and methodological principles of the system concept in the theory of socialism with Chinese characteristics, and in the governance of the country always adhere to the concept of system, integrate systematic thinking and systematic methods into the overall planning of the party and the country's various undertakings, from the overall planning of the domestic and international two overall situations and the overall system layout of "5 in one" and "four comprehensives". Then to the subsystem planning of various subdivided fields, we will promote the in-depth development of the Sinicization of Marxism.

Keywords: concept of system; the modernization of Marxism in China; the Communist Party of China

The 20th National Congress of the Communist Party of China is a very important conference held at the critical moment when the whole Party and the people of all ethnic groups are embarking on the new journey of building a modern socialist country in an all-round way and marching towards the goal of the second century. The report of the conference is a Marxist programmatic document, It points out the way forward and establishes the action guide for the development of the party and the state's cause in the new era and the new journey and the second century. The report clearly points out that it is necessary to grasp, adhere to and make good use of the world outlook and methodology of Xi Jinping's thought of socialism with Chinese characteristics in the new era, and adhere to the concept of system is one of them. General Secretary Xi Jinping deeply realized that "the system concept is a basic thinking and working method" [1]. The Chinese Communists adhere to the concept of system, take Marxist philosophy as the theoretical foundation, and combine with the new practical needs, have made many original contributions, and constantly promote the modernization of Marxism in China.

1 ADHERE TO THE MARXIST THEORETICAL ORIGIN OF THE SYSTEM CONCEPT.

General Secretary Xi Jinping said in the report of the 20th National Congress of the Communist Party of China, "Everything is interconnected and interdependent. Only by observing things from a universally connected, comprehensive and systematic point of view of development and change can we grasp the law of development of things." General Secretary Xi Jinping directly integrated "comprehensive system" into the theoretical exposition of materialist dialectics, revealing the inherent unity of "system concept" and Marxist philosophy. The most fundamental world outlook and methodology of Marxism are dialectical materialism and historical materialism, which embody the Marxist system view and lay the basic philosophical basis for the Chinese Communists to adhere to the system concept.

Systematic Thinking of 1.1 Dialectical Materialism

In the 1950 s, von Bertalanffy formally founded the general system theory, and he explicitly mentioned that the history of the system concept should be traced back to the dialectics of Marx and Hegel. The concept of system is deeply rooted in Marxist

philosophical theory. Although Marx did not clearly use words such as "system", "system thinking" and "system method" to directly express "system concept" in his time, the spiritual essence of "system concept" has been reflected in his complete ideological system. Moreover, Engels has directly used the word "system" in his "Dialectics of Nature", but we used to translate it as "system". Marx and Engels have always insisted on understanding the world with the concept of system, and deeply reflected the system thinking in their natural and world views.

Dialectical materialism believes that the material world is an organic whole of universal connections between things. Connection refers to the relationship between the internal elements of things and between various things that influence, restrict and interact with each other. The universal connection of things constitutes the movement of things., Change and development. As Engels wrote in "Dialectics of Nature": "The whole nature we face forms a system, that is, the interconnected totality of various objects, and the objects we refer to here refer to all material existence, from planets to atoms, and even to etheric particles, if we admit the existence of etheric particles. These objects are interrelated, that is, they are interacting, and it is this interaction that constitutes motion."^[2] The "system" here is the "system". Engels uses the concept of system to understand the material world and regards nature as a natural system in which internal elements are interconnected and interact with each other. The substances existing in these 1 systems are interrelated and eternal.

Systematic Thinking in 1.2 Historical Materialism

Marx and Engels not only used systematic thinking to reveal the inherent attributes of universal connections and eternal development in the world, but also applied systematic thinking to the study of social history. Western academic circles regard Marx as "the ancestor of modern systematic methods in social science"^[3]. In Marx's view, society is an organic whole, "a social organism in which all relations exist simultaneously and are interdependent"^[4]. In essence, the "social organism" here refers to the "social system". The social system contains many elements such as environment, population, behavior, psychology, groups, etc. Many elements are related to each other. It is the interdependence and interaction between these elements that lay a solid foundation for the formation of the social system. Historical materialism emphasizes the systematic characteristics of human society, analyzes the basic structure and basic contradictions of human society, reveals that the essence of human beings is the sum of social relations, clarifies the relationship between productive forces and production relations, economic base and superstructure, examines the structure, elements and evolution of social system, and then grasps the development and change of human society as a whole.

It can be seen that the founder of Marxism insisted on investigating nature and human society with the concept of system, which provided us with the basic principles for understanding and transforming the world. Although the "system concept" is not clearly stated in the classic works of Marxism, the spiritual core of the "system concept" is born out of materialist dialectics. Dialectical materialism and historical materialism themselves are the concentrated expression of the "system concept. In other words, the "system concept" is born in dialectical materialism and historical materialism. The "system concept" is in harmony with Marxist theory and cannot be separated. The Chinese Communists adhere to Marxism and must adhere to the system concept.

2 GENERAL SECRETARY XI JINPING'S ORIGINAL THEORETICAL CONTRIBUTION TO ADHERING TO THE SYSTEM CONCEPT

Xi Jinping's thought of socialism with Chinese characteristics in the new era is contemporary Chinese Marxism, Marxism in the 21st century, a model for the innovative development of Marxism, and a new leap in the modernization of Marxism in China. Adhering to the concept of system is one of the world outlook and methodology of Xi Jinping's thoughts on socialism with Chinese characteristics in the new era. In the report of the 20th National Congress of the Communist Party of China, General Secretary Xi Jinping not only emphasized the importance of adhering to the concept of system, but also pioneered and innovated at the level of methodology. Continuously promote the modernization of Marxism in China.

2.1 General Secretary Xi Jinping pointed out the strategic orientation of adhering to the concept of system.

Adhering to the concept of system is an inevitable requirement for adhering to the Marxist world outlook and methodology, and is of great guiding significance for us to comprehensively promote the great rejuvenation of the Chinese nation. General Secretary Xi Jinping pointed out the strategic orientation of adhering to the concept of system.

From the perspective of theoretical logic, the system concept is a basic idea and working method. The Fifth Plenary Session of the 19th Central Committee of the Communist Party of China adopted the "Proposal of the Communist Party of China on Formulating the Fourteenth 5 Plan for National Economic and Social Development and the 2035 Long-term Goals" (hereinafter referred to as the "Proposal"), emphasizing "Adhering to the concept of system" is one of the 5 principles that must be followed in economic and social development during the "14th 5" period. This is the first time that "adhering to the concept of system" has been put forward in the plenary session of the CPC Central Committee and important documents, and it is a major innovation point of the party's theoretical innovation. In the report of the 20th National Congress of the Communist Party of China, it was once again emphasized that to continue to promote theoretical innovation based on practice, we must first grasp the world outlook and methodology of Xi Jinping's new era of socialism with Chinese characteristics, and adhere to and use the standpoints and methods. In view of this, the report puts forward "six insistence", "adhere to the system concept" is one of them.

From the perspective of practical logic, adhering to the concept of system is the inevitable practical need to solve the contemporary problems of our country in the new era and new journey. The "proposal" clearly points out that "after building a moderately prosperous society in an all-round way, we will embark on a new journey of building a modern socialist country in an

all-round way. China's development environment is facing profound and complex changes, the problem of unbalanced and inadequate development is still prominent, and contradictions in economic and social development are complex. We must plan and solve them from the perspective of system, and comprehensively coordinate and promote work in all fields and socialist modernization."^[5]

From the perspective of historical logic, adhering to the concept of system runs through the whole process of people's revolution, construction and reform under the leadership of the Communist Party of China. The centennial struggle of the Party is a process in which the Chinese Communists use systematic concepts and systematic methods to continuously promote the modernization of Marxism in China. Comrade Mao Zedong once pointed out in "The Strategic Issues of China's Revolutionary War": "Without the overall situation in mind, one will not really throw 1 a good flag."^[6] Comrade Deng Xiaoping once put forward in his speech on "The Current Situation and Tasks": "The tasks of modernization are multifaceted, and all aspects need to be comprehensively balanced and cannot be 1 alone."^[7] Comrade Jiang Zemin proposed that in the process of promoting socialist modernization, 12 major relationships with overall significance must be handled well. Comrade Hu Jintao proposed comprehensive, coordinated and sustainable development, of which "overall planning and consideration" is the fundamental method. Entering a new era and embarking on a new journey, General Secretary Xi Jinping clearly pointed out that "the system concept is a basic thinking and working method", requiring the Chinese Communists in the new era to adhere to the system concept, assume historical responsibilities, strengthen historical initiative, and continue to write Marxism. A new chapter in the era of Sinicization.

2.2 General Secretary Xi Jinping reveals the systematic characteristics of promoting the modernization of Marxism in China.

Dialectical materialism and historical materialism have contained profound systematic characteristics since their appearance. The modernization of Marxism in China has always adhered to systematic thinking and systematic methods, focusing on the overall situation at home and abroad, and continuing to promote the great cause of the party, the country and the people. In the new era, General Secretary Xi Jinping has vividly reflected this systematic characteristic of Marxism in the practice of governing the country.

From the perspective of the "integrity" and "unity" of the system, it is a huge systematic project to comprehensively build a modern socialist power and realize the great rejuvenation of the Chinese nation. General Secretary Xi Jinping stressed: "comrades of the political Bureau of the CPC Central Committee should be good at thinking about fundamental, overall, and long-term issues related to the overall situation of the work of the party and the state." put the task of the new era and new journey into a long axis of time, coordinate the overall layout of the "5 in one" and the "four comprehensive" strategic layout, systematically promote Chinese-style modernization, and create a new form of human civilization.

From the "hierarchical" and "structural" level of the system, the construction of socialism with Chinese characteristics is a general system, which includes the "subsystems" of economic construction, political construction, cultural construction, social construction, and ecological civilization construction. Among the subsystems, there are lower and smaller "subsystems". For example, General Secretary Xi Jinping is guiding ecological work, it is pointed out that "it is necessary to improve the quality and stability of the ecosystem" [8]; in guiding the work of cracking down on the crime of telecommunications network fraud, it is pointed out that "it is necessary to coordinate development and security, strengthen system concepts, rule of law thinking, focus on source governance, and comprehensive governance"; In guiding political and legal work, it is pointed out that "we must pay more attention to system concepts, rule of law thinking, and strong foundation guidance, and effectively promote high-based guidance"; in guiding the work of national security, it is pointed out that "national security should run through the whole process of all aspects of the work of the party and the state, plan and deploy together with economic and social development, adhere to systematic thinking, build a large security pattern, and promote international security and world peace." in guiding the work of governing the country according to law, it is pointed out that "comprehensively governing the country according to law is a systematic project and should be planned as a whole, pay more attention to systematicness, integrity, coordination and so on.

From the "goal" and "trend" level of the system, the internal elements of the system, or the interaction between subsystems, so that the system can steadily tend to a certain state. Since its founding, the Communist Party of China has shouldered the historical mission of realizing the great rejuvenation of the Chinese nation without hesitation. In the new era and new journey, building a modern and powerful socialist country in an all-round way and realizing the great rejuvenation of the Chinese nation is not only the goal and mission of the Chinese Communists, but also the "systematic goal" of the 1 grand project of building a socialist country in an all-round way ". In each subsystem, how to coordinate the promotion of the overall layout of "5 in one", how to coordinate the promotion of the "four comprehensive" strategic layout, and how to deal with the overall domestic and international situations, ultimately point to the 1 system goal of "building a modern socialist power in an all-round way.

From the "dynamic" and "open" level of the system, the internal elements of the system, the system and the external environment are not separated from each other, but interrelated and interactive, the system boundary is not rigid and closed, but dynamically open, the more organic the system, the higher the degree of openness. The "Fourteenth 5" has opened a new journey of building socialist modernization in an all-round way. General Secretary Xi Jinping pointed out: "Entering the new development stage, implementing the new development concept, and building a new development pattern, the problems that need to be solved will become more and more diverse and complex." The practice of Chinese-style modern generation construction is becoming more and more comprehensive, dynamic, and systematic. In the face of complex situations and arduous tasks, we must more consciously adhere to the concept of system, multi-angle, multi-level, and multi-faceted economic and social development, Use systematic scientific methods to comprehensively coordinate the construction of socialist modernization, optimize economic and social governance methods, and achieve dynamic balance among multiple goals.

2.3, General Secretary Xi Jinping innovated the methodological principle of adhering to the concept of

system under the guidance of Marxism in the era of China.

General Secretary Xi Jinping pointed out in his speech during the 27th collective study of the Political Bureau of the 19th Central Committee: "To fully, accurately and comprehensively implement the new development concept, it is necessary to coordinate the overall domestic and international situations, and coordinate the overall layout of the '5 in one'. And the 'four comprehensive' strategic layout, strengthen forward-looking thinking, overall planning, strategic layout, and overall advancement."

To strengthen forward-looking thinking is to adhere to the system concept from the time dimension. Emphasize the establishment of a grand historical view, grasp the general trend of historical development, grasp the development trend of the times, and explore the laws of historical development through the changing domestic and international situation, so as to enhance the predictability and creativity of strategic decision-making. We must not only see the opportunities we are currently facing, seize the opportunities to meet the challenges; but also see the risks and challenges that coexist with the opportunities, make scientific predictions of potential risks, establish bottom-line thinking, and be prepared to deal with various risks and challenges. Take the initiative in the struggle.

To strengthen overall planning is to adhere to the system concept from the spatial dimension. Emphasize the establishment of overall awareness, handle the relationship between "overall and local", consciously look at problems from the overall situation, and be able to regard the work of the region and department as part of the "national chess game". The work of the department is integrated into the implementation of the decision-making and deployment of the Party Central Committee. With the overall situation in mind, we can grasp the overall situation, focus on major issues, and solve specific problems. We must not only see the trees but not the forest, and we must not treat the head and foot pain. We must be good at digging deep-seated problems and considering overall interests., Big mind and big realm carry out overall planning.

Strengthening the strategic layout is to adhere to the system concept from the top-level design. The strategic layout is based on forward-looking thinking and overall planning, looking at, thinking about, and handling problems from the forefront of the times and the overall strategic perspective, making plans and layouts for various tasks, emphasizing "overall planning" and emphasizing "comprehensive coordination". With a far-sighted strategic vision and overall strategic wisdom, General Secretary Xi Jinping put forward a series of new concepts, new ideas and strategies for governing the country, such as promoting the overall layout of "5 in one", coordinating the strategic layout of the "four comprehensive", coordinating development and security, and coordinating epidemic prevention and control and economic and social development, and achieving major theoretical and practical achievements in the modernization of Marxism in China.

To strengthen the overall promotion is to adhere to the system concept from the work practice. Forward-looking thinking, overall planning, and strategic layout must ultimately be based on the work practice of "overall advancement. General Secretary Xi Jinping emphasized: "Major reforms are all related to the whole body, and they require comprehensive consideration and coordinated advancement." Building a modern socialist country in an all-round way is a systematic project, and it is all the more necessary to adhere to comprehensive balance and overall promotion. For example, in terms of economic construction, we should promote the construction of a modern economic system in an all-round way, completely, accurately and comprehensively implement the new development concept, build a new development pattern, deepen the supply side structural reform, promote the digital economy, develop a low-carbon economy, etc.; in the aspect of governing the country according to law, we should promote the rule of law, rule of law and administration according to law. Adhere to the construction of a country under the rule of law, more prominent system governance, legal governance, comprehensive governance, source governance overall promotion, collaborative efforts. Of course, in the process of overall advancement, we must also focus on key breakthroughs, use key breakthroughs to drive overall advancement, and solve key problems in the overall advancement.

3 ADHERE TO THE CONCEPT OF SYSTEM TO PROMOTE THE MODERNIZATION OF MARXISM IN CHINA TO DEVELOP IN DEPTH

The report of the 20th National Congress of the Communist Party of China pointed out, "Practice tells us why the Communist Party of China can and why socialism with Chinese characteristics is good. In the final analysis, it is a Marxist line, a Marxist line of sinicization and modernization."

Marxism regards society as an organic whole, and uses systematic thinking and systematic methods to scientifically analyze these 1 social systems. From the relationship between the whole and the part, it reveals the social system from the unity of opposites of contradictions. Features and operating laws. From the theoretical level, the truth of Marxism is reflected in the systematic thinking of dialectical materialism and historical materialism; from the practical level, the systematic thinking and systematic method of Marxism guide the Sinicization and modernization of Marxism to continue to write new chapters. In short, Marxist theory itself has a systematic core, which guides the Chinese Communists to use systematic thinking and systematic methods to analyze and solve major theoretical and practical problems encountered in the process of Chinese revolution, construction and reform.

Socialism with Chinese characteristics has entered a new era, a century of changes and accelerated evolution, the international environment is complex, the task of domestic reform is arduous, and our party is facing new tests in governing the country. General Secretary Xi Jinping adheres to integrity and innovation, adheres to the concept of system, grasps the overall situation of the great rejuvenation strategy of the Chinese nation and the great changes unseen in a century, takes charge of great struggles, great projects, great undertakings, and great dreams, and promotes the overall layout of "5 in one". Coordinate the promotion of the "four comprehensive" strategic layout, and put forward a series of original major strategic ideas on governance.

It has greatly enriched the theoretical achievements of the Sinicization of Marxism, and provided a new rational mechanism and practical method for developing marxism. The cause of socialism with Chinese characteristics has entered a new era. The Party Central Committee with General Secretary Xi Jinping as the core has always adhered to the system concept and integrated systematic thinking and systematic methods into the overall planning of the party and the country. With the "5 in one" and "four comprehensive" general system layout, to the subsystem planning of various subdivisions, layer by layer to promote the Sinicization of Marxism to in depth development.

The overall system layout perfects the overall structure of the cause of socialism with Chinese characteristics, and the subsystem plan optimizes the local structure of the modernization of Marxism in China.

The Chinese Communists adhere to the concept of system, which is first embodied in establishing a 1 view of the overall situation and the overall situation, thinking and grasping the new tasks in the new era based on the overall vision and strategic height. In the new era and new journey, the Party Central Committee with General Secretary Xi Jinping as the core plans the overall domestic and international situations, improves the overall layout of "5 in one", establishes the "four comprehensive" strategic layout, and fully demonstrates the party's governance in the new era. The new strategy of governance is a general strategy related to the long-term development of the party and the country, and improves the overall structure of the cause of socialism with Chinese characteristics, it occupies an important position in Xi Jinping's theoretical system of socialism with Chinese characteristics in the new era.

The Fifth Plenary Session of the 19th Central Committee of the Communist Party of China proposed that "the whole party should coordinate the overall situation of the great rejuvenation strategy of the Chinese nation and the great changes unseen in the world in a century." Coordinating the two overall situations at home and abroad is a strategic judgment made by our party based on the conditions of the world, the country, and the party. It points out China's position in the long history and the international pattern. It is far-sighted and guides us to recognize the relationship between the two overall situations. Relationship, promote the benign interaction between China and the world, and then realize the great rejuvenation of the Chinese nation. From the perspective of theoretical logic, General Secretary Xi Jinping pointed out: "Today, we are closer, more confident and capable of realizing the great rejuvenation of the Chinese nation than at any time in history", clarifying the historical mission of the contemporary Chinese Communist Party; "China is currently in modern times. In the best period of development, the world is in a major change unseen in a century, treating the great rejuvenation of the Chinese nation and the century-old changes as a system reveals the dialectical relationship between the " two overall situations ", and profoundly answers" what historical stage are we in, what is our relationship with the world, and what should we do? "And other major theoretical questions. From the perspective of practical logic, General Secretary Xi Jinping emphasized that leading cadres must have two overall situations in mind, which is the basic starting point for planning work. To coordinate the overall domestic and international situations, on the one hand, it is required to adjust strategic strategies according to the changes in the development situation of the international community, accurately, scientifically, and timely identify changes and respond to changes, so as to create more powerful conditions for the great rejuvenation of the Chinese nation; On the other hand, it is required to actively participate in international affairs, assume international responsibilities, demonstrate the responsibility of a great power, maintain world peace, and promote global development, promote the great changes in the world in a direction conducive to the progress of mankind.

Since the 18th National Congress of the Communist Party of China, "ecological civilization construction" has been promoted to a higher strategic level and incorporated into the overall layout of the original "4 in one" of the cause of socialism with Chinese characteristics. The overall layout of China's socialist modernization construction has been officially transformed into "5 in one", that is, economic construction, political construction, cultural construction, social construction and ecological civilization construction. "5 in one" is to adhere to the scientific layout of the concept of the system. First of all, the overall layout of "5 in one" is an overall system to promote the cause of socialism with Chinese characteristics. The economic, political, cultural, social, and ecological 5 are independent and interrelated, and complement and complement each other. The overall framework for building a modern and powerful socialist country. Secondly, the overall layout of "5 in one" is an organic system in which all parts work together. There are 5 aspects of economy, politics, culture, society and ecology. The short board in any one of them will affect the development of other aspects, and ultimately affect the development of the whole organic system. Therefore, 5 is one aspect that should not favor one over the other, but should coordinate development and make concerted efforts, and promote the coordinated development of the cause of socialism with chinese characteristics. Finally, the overall layout of "5 in one" is a dynamic system that is constantly developing. From the perspective of the evolution of "5 in one", from the initial "two civilizations together" to "Trinity" and "4 in one" The evolution process of "5 in one" then reflects the dynamics of the system; from the perspective of the practice pattern of "5 in one, these 5 aspects are not motionless and mechanically combined together, but in the practice of promoting the development of the cause of socialism with Chinese characteristics, all aspects are interrelated and influence each other, with the development of social practice, all aspects show different degrees of development, and have different degrees of impact on other aspects, the whole society is constantly moving forward in the continuous linkage of these 5 aspects.

The "four comprehensive" strategic layout is an important part of Xi Jinping's theory of socialism with Chinese characteristics in the new era, which strategically defines the key links, key areas and main directions of various undertakings of the party and the state at present and in the future. Of course, the connotation of the "four comprehensives" is not static, but with the development of my country's socialist cause, when a certain task is completed and the goal is achieved, it is necessary to change the main task and determine new goals. Therefore, when we build a well-off society in an all-round way, the first "comprehensive" of the "four comprehensive", that is, "building a well-off society in an all-round way" will be transformed into "building a modern socialist country in an all-round way". Therefore, our current "four comprehensive" strategic layout is "building a modern socialist country in an all-round way", "comprehensively deepening reform", "comprehensively governing the country according to law" and "administering the party strictly in an all-round way". These four aspects are interrelated,

interdependent and interpenetrated, forming an organic unity with tight internal logic. Among them, building a modern socialist country in an all-round way is another 3 "comprehensive" strategic goal. At the same time, another 3 "comprehensive" is a strategic measure to realize the comprehensive construction of a modern socialist country. "Comprehensively deepening reform" provides dynamic support for the coordinated promotion of the "four comprehensives", and "comprehensively governing the country according to law" provides legal guarantee for the coordinated promotion of the "four comprehensives, the" comprehensive and strict governance of the party "provides organizational guarantee for the coordinated promotion of the" four comprehensives. Each "comprehensive" is not only a self-contained independent system, but also an integral part of the "four comprehensive" system. Only the coordinated development of each independent system can promote the overall optimization of the "four comprehensive" large system.

Whether it is coordinating the overall domestic and international situations, or the "5 in one" overall layout or the "four comprehensive" strategic layout, it is the new era of the Party Central Committee with Comrade Xi Jinping at the core based on a global perspective, focusing on a grand historical view, and grasping the world The general trend of development and the law of historical development, using systematic thinking and systematic methods, and further improving the overall structure of the cause of socialism with Chinese characteristics are the latest theoretical achievements of Marxism. In addition, it needs to be emphasized that adherence to the system concept is not only reflected in the strategic overall situation of the party and the country. As the scientific working methods of the Chinese Communists, system thinking and system concept have penetrated into the various undertakings of the party and the country. It is reflected in the differentiation of many subsystems under the large system of a certain 1 field, and many sub-subsystems under the subsystem, which not only refines the main points of work, the local structure has been optimized, and the whole large system has been promoted to achieve overall development through layer-by-layer promotion and synergy.

In the new era and new journey, the Party Central Committee with Comrade Xi Jinping as the core adheres to the systematic concept in governing the country, emphasizes forward-looking thinking, overall planning, strategic layout, and overall promotion, and continues to promote theoretical innovation on the basis of practice. continue to write a new chapter in the Sinicization of Marxism.
